

## How to Get Rid of Explorer's Security Alert in ChargerNet

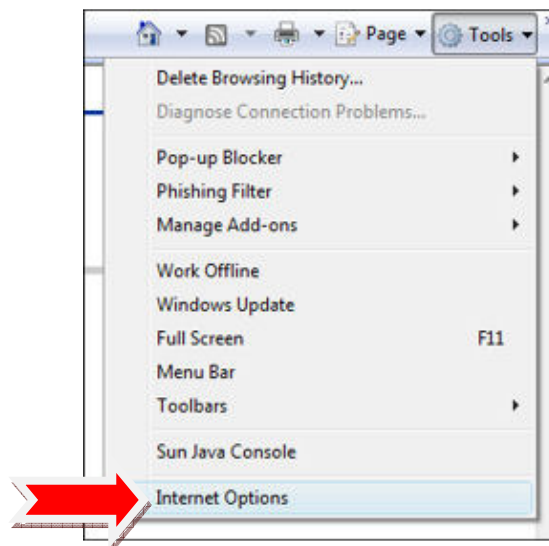

If you browse ChargerNet using Internet Explorer 7, you might receive a popup message when accessing Banner Self-Service Employee Menu. This is the result of a local security setting on your computer and can be adjusted.

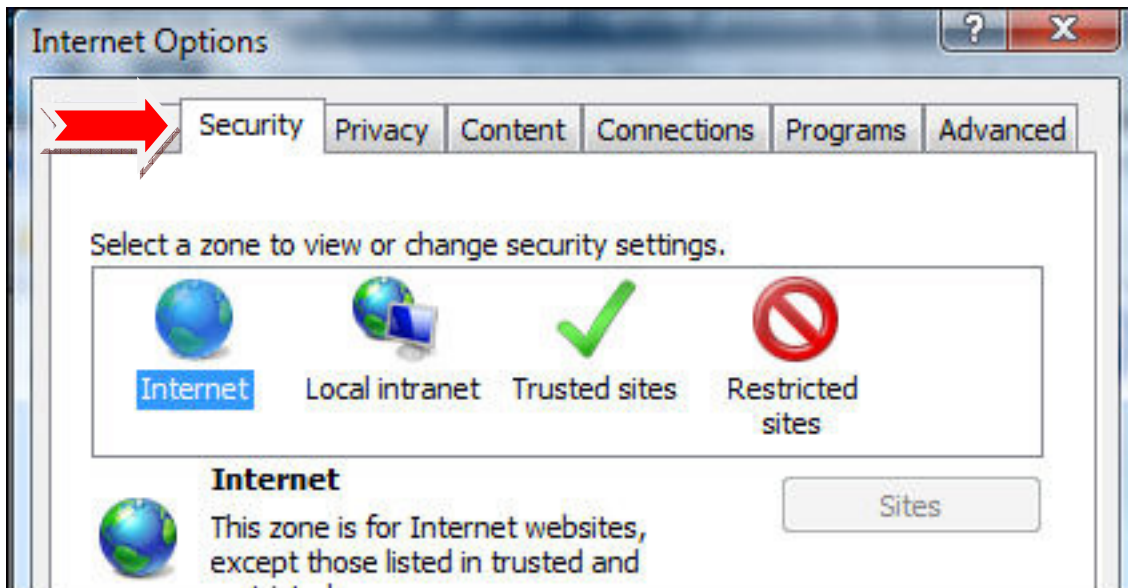

Follow these steps to eliminate this popup.

First, select **“Yes.”** You will then be taken into Banner.

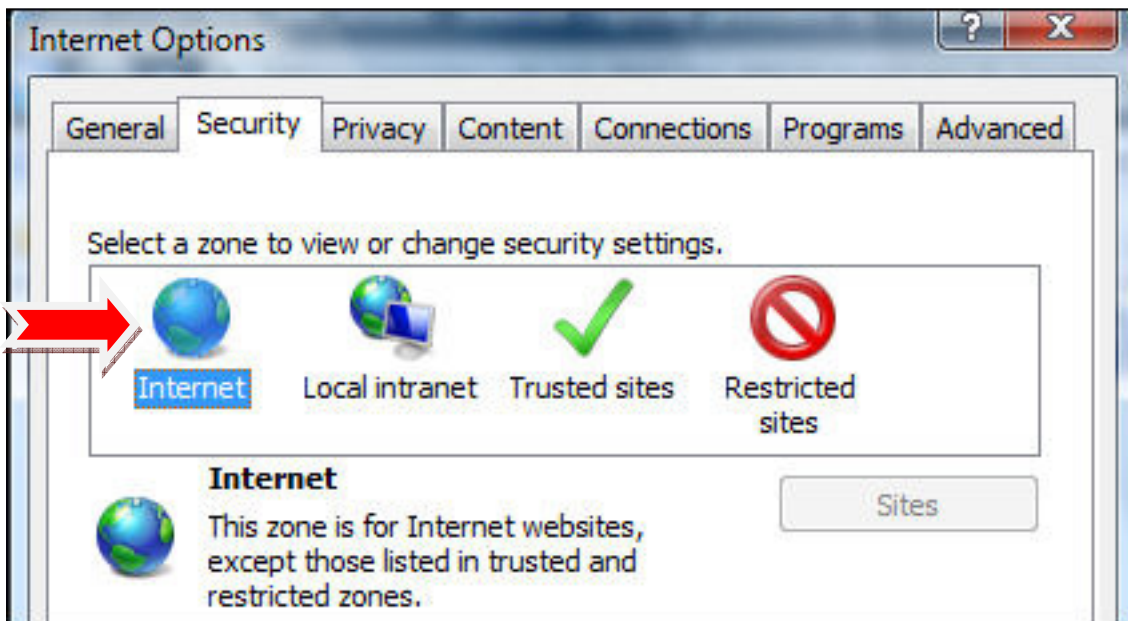

Next, go to **Tools** (located in the upper right-hand side of your toolbar). Select **Internet Options** from the pulldown menu.

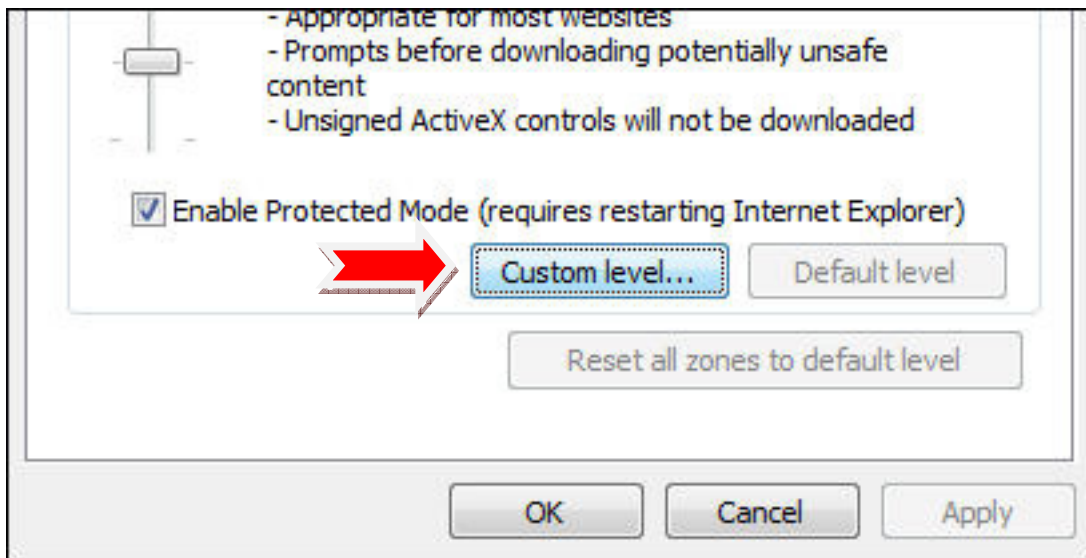

A tabbed window will appear. Select the **Security** tab.

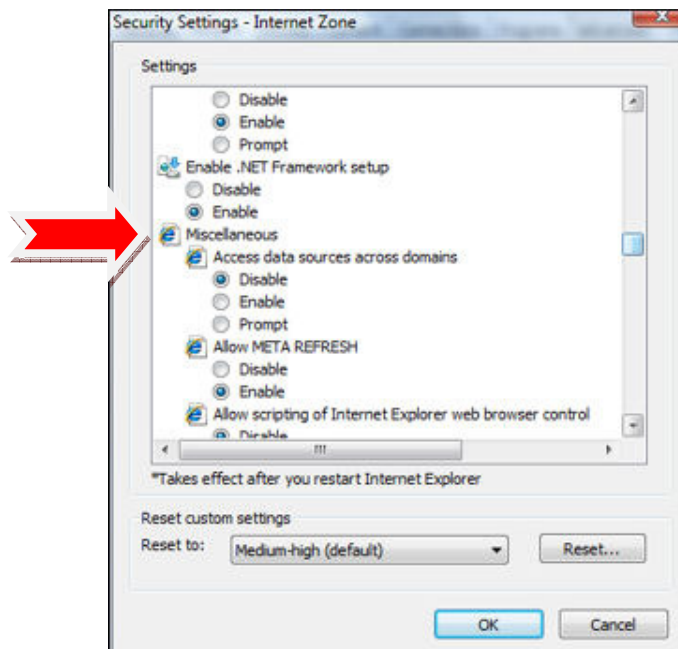

Next, make sure **Internet** is selected as your zone.

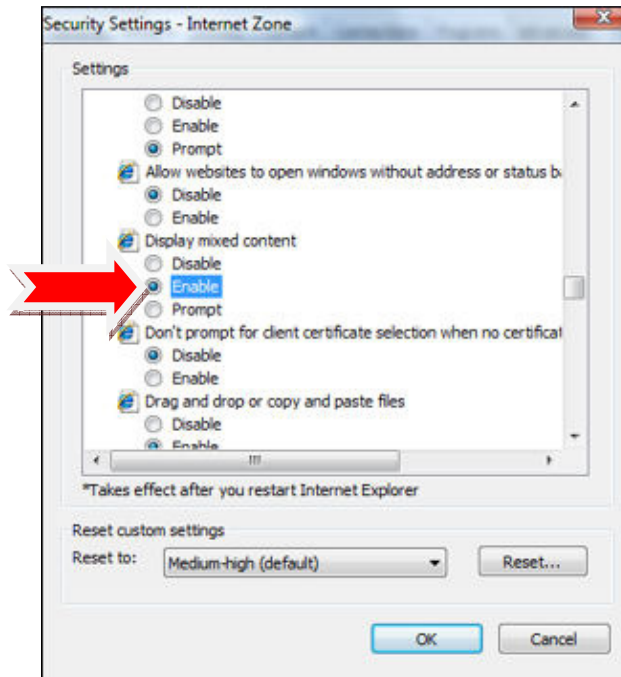

Now, click **Custom Level**.

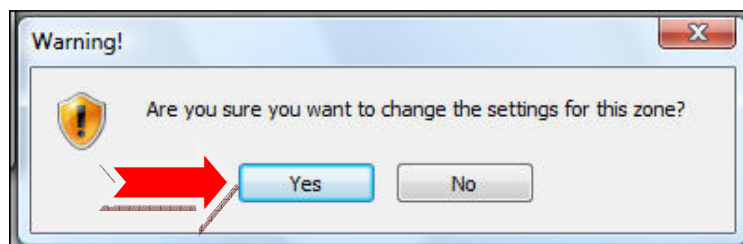

A scrolling **Settings** menu with additional subsections will appear. Scroll down until you reach the **Miscellaneous** section.

This subsection contains an option to **Display Mixed Content**. Click the **Enable** button.

Click **Ok**. A warning popup will appear—select **Yes**.

On the **Internet Options** window, click **OK**.

The settings should take effect immediately.
