Computer Engineering

Computer Engineers design systems which have both hardware and software components. Computer hardware engineers research, design, develop, test, and oversee the manufacture and installation of computer hardware including computer chips, circuit boards, keyboards, router, and printers. They also develop circuit boards for use in commercial, military, and space applications. Computer software engineers develop

graphical user interfaces, write simulation software, develop parallel processing algorithms, design new data-compression devices, and work in multimedia to name some examples.

Highlights

- Huntsville, Alabama has the #5 concentration of Computer Engineering jobs in the United States.
- Program feature both hardware and software design.
- Students co-op with ADTRAN, Lockheed Martin, Missile Defense Agency, and many more.
- Average median salary in 2012: \$100,920.

"Because I work part-time while taking classes at UAH, I have literally been able to learn something new at school and then apply it the next day at work. Similarly, my work experience has not only given me a stronger appreciation for my coursework, but also has allowed me to develop engineering skills that I will continue to use for the rest of my life."
