

Chandana Anand

Graduate Research Assistant

Department of Mechanical and
Aerospace Engineering

BIO:

Undergraduate research was based on the study of flow analysis in a partial admission turbine nozzle employed in a certain torpedo. The focus was to study the variation of parameters such as flow rate, pressure and velocity in the nozzle and to compute the power aft of the turbine.

Current research involves the study of wild land fire dynamics using physics based models. The thesis work is being carried out under the guidance of Dr. Shankar Mahalingam and Dr. Babak Shotorban.
