

## ASHING FURNACE

**Manufacturer:** Milestone

**Type/Model:** PYRO XL

The determination of ash content is a valuable test in determining material properties. The special microwave-transparent muffle allows the radiation to pass through and rapidly raise the temperature of a high-absorber material plate. The test sample is placed in a crucible which is weighed pre and post ashing and recorded in the controller. We have the ability to use our Mass-spectrometer to analyze the vapor from the ashing process.
