

DROP TESTER

Manufacturer: LAB

Type/Model: AD125

Payload Capacity: 125 lbs (56 kg)

Drop Height: 8" – 84"

Specifications / Standards:

- ISTA
- ASTM
- ISO

The drop tester is an important tool to verify impact shock resistance. Shipping standards can be verified using the drop tester to ensure that your packaging designs meet the standard. With remote shock sensors applied to the test specimen and to the external surface of the shipping container we can determine the dampening effects of the packaging material. This is important when shipping sensitive electronics to make sure they can survive the shipping standard, either custom or published.
