STEM for Space Scholarship

The STEM for Space Scholarship was established in 2015, and is awarded to students in either Engineering or Science majors (with the exception of Earth Systems Science) to provide assistance for students who have an interest in careers in aerospace and space exploration. Students who are academically sound and have attended Space Camp at the U.S. Space and Rocket center are candidates for this award.

The STEM for Space Foundation (S4S) was founded in 2014 and has established a $10 million endowment to fund STEM for Space scholarships at accredited U.S. universities. S4S is a partnership between the Association of Space Explorers and the U.S. Space and Rocket Center in Huntsville, Alabama, with the leadership and patronage of former U.S. Astronaut and STEM for Space founder, Dr. Own Garriott.

This scholarship is for one year only; however, recipients may re-apply. The student must maintain a full-time course load (12 credit hours) each semester.
