

# **Lessons from the Road: The Army Aviation Supply Chain**

**Presented to the  
MDA Supply Chain Forum**

**Kenneth W. Sullivan, P.E.  
Office for Economic Development  
University of Alabama in Huntsville  
[sullivk@uah.edu](mailto:sullivk@uah.edu)  
256.824.2676**

**6 June 07**

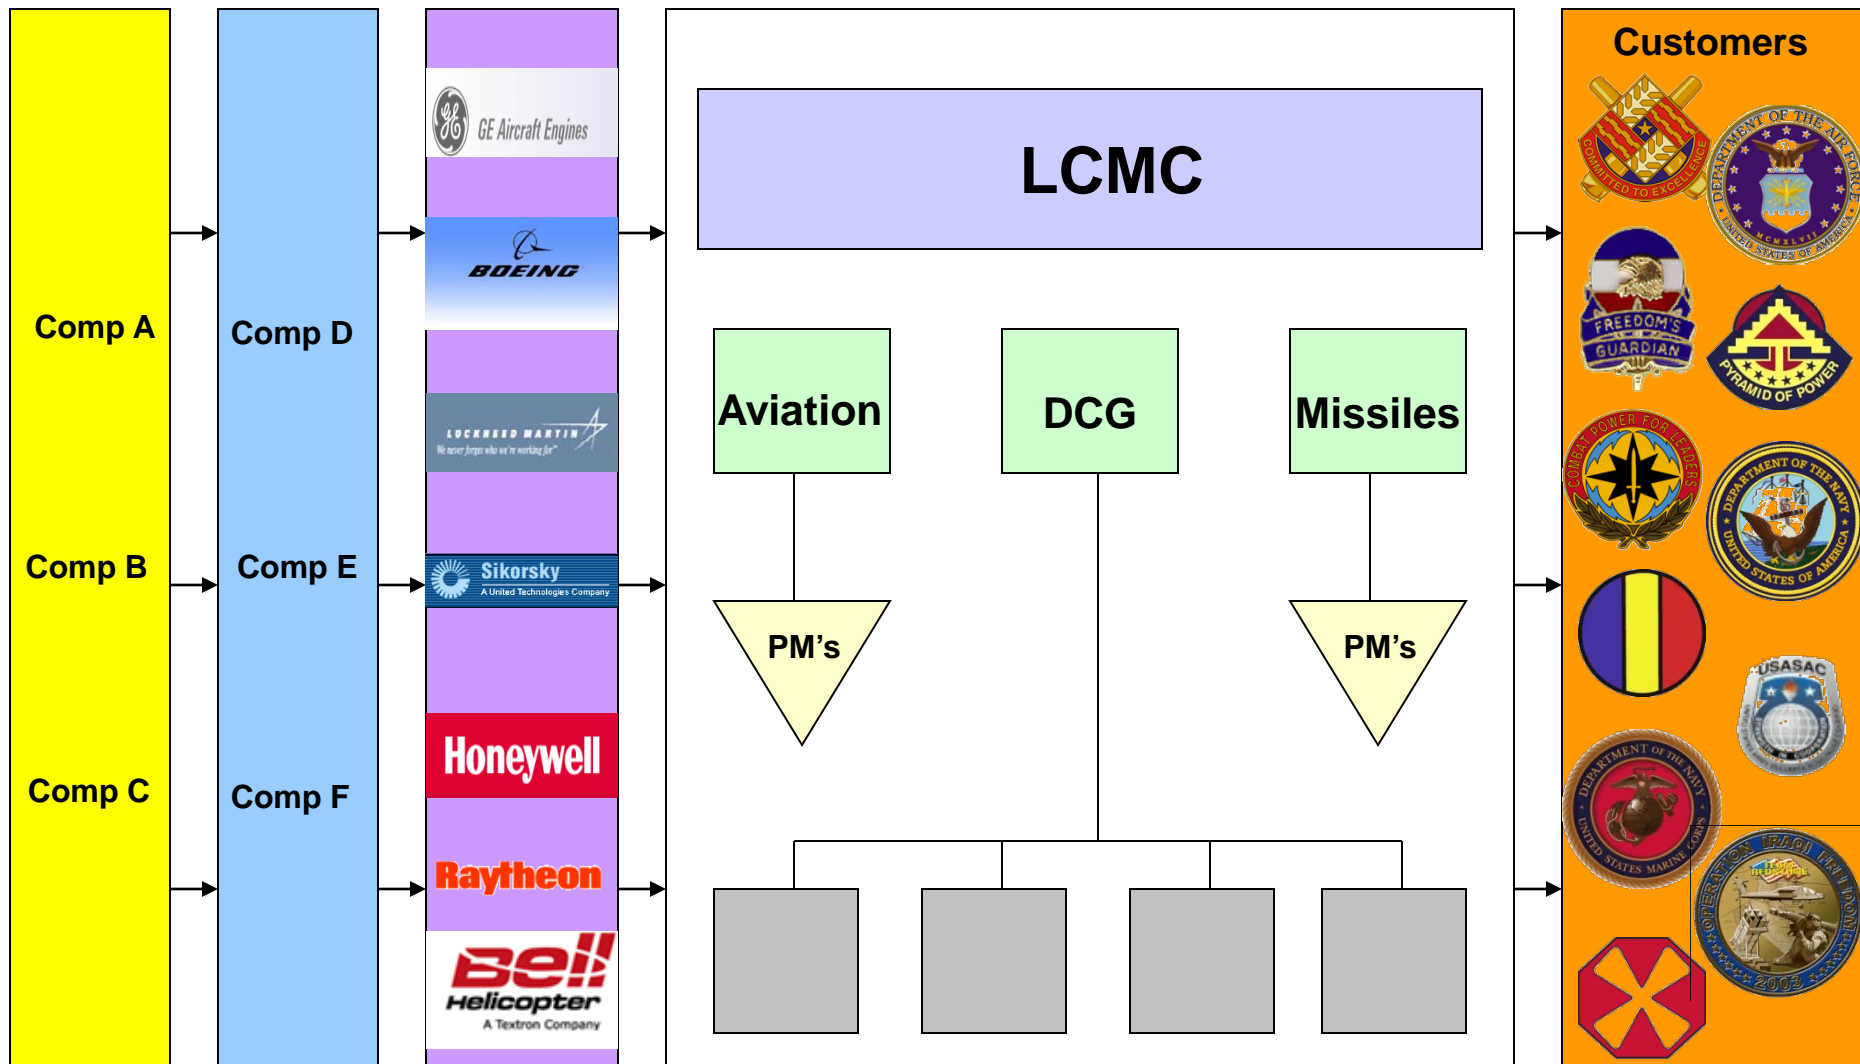

# Outline

- Scope of Project
- Supply Chain Findings
- Corrective Actions
- Industrial Base Issues
- Future Directions in Aerospace  
Supply Chain Management
- Final Thoughts

# Capabilities

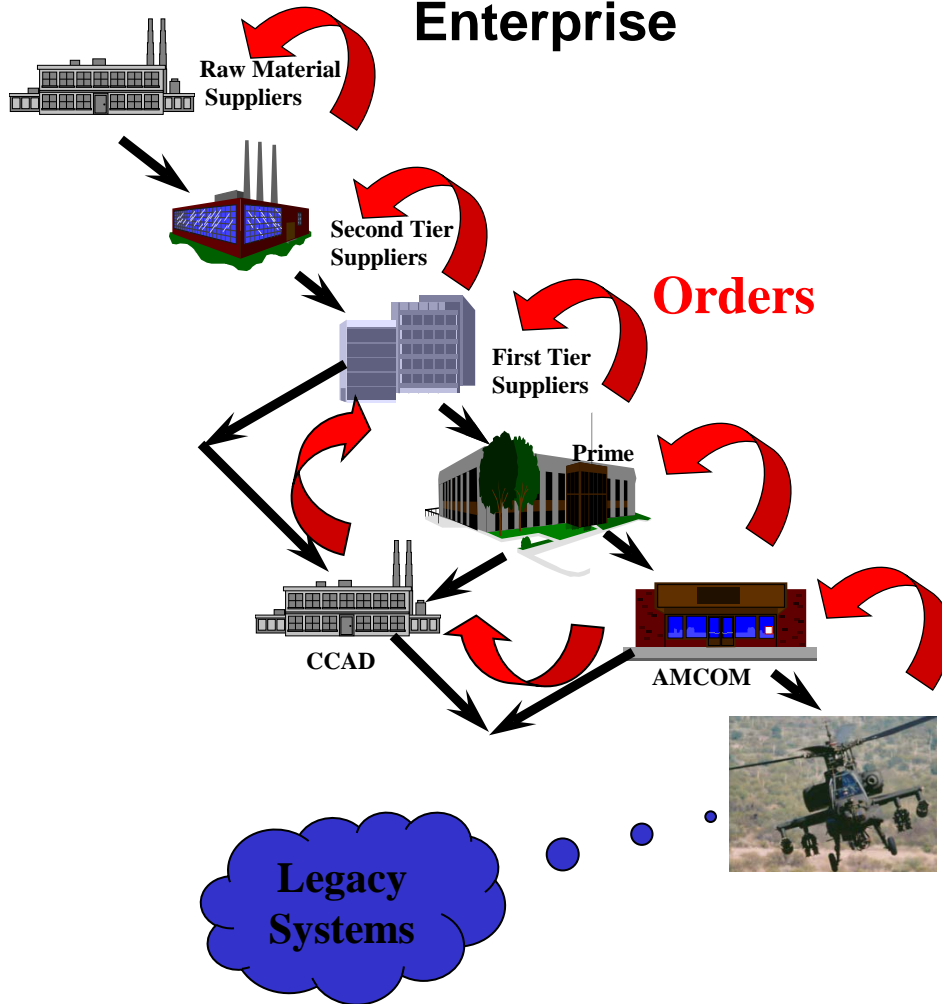

- Research Center at UAH (26 full time employees)
  - Lean Enterprise/Manufacturing
    - Training
    - Value Stream Mapping
    - Kaizen Events
  - Six Sigma and Quality Processes
  - Supply Chain Design and Optimization
  - Dynamic Modeling
  - Transportation Infrastructure
  - Competitiveness/Strategic Management
  - Profitability Improvement
  - Economic Development Strategies
  - Administration of Industry Associations
- MIT Relationships
  - Forum for Supply Chain Innovation
  - Lean Aerospace Initiative

# “Factory to Foxhole” Analysis

# The AMCOM Supply Chain

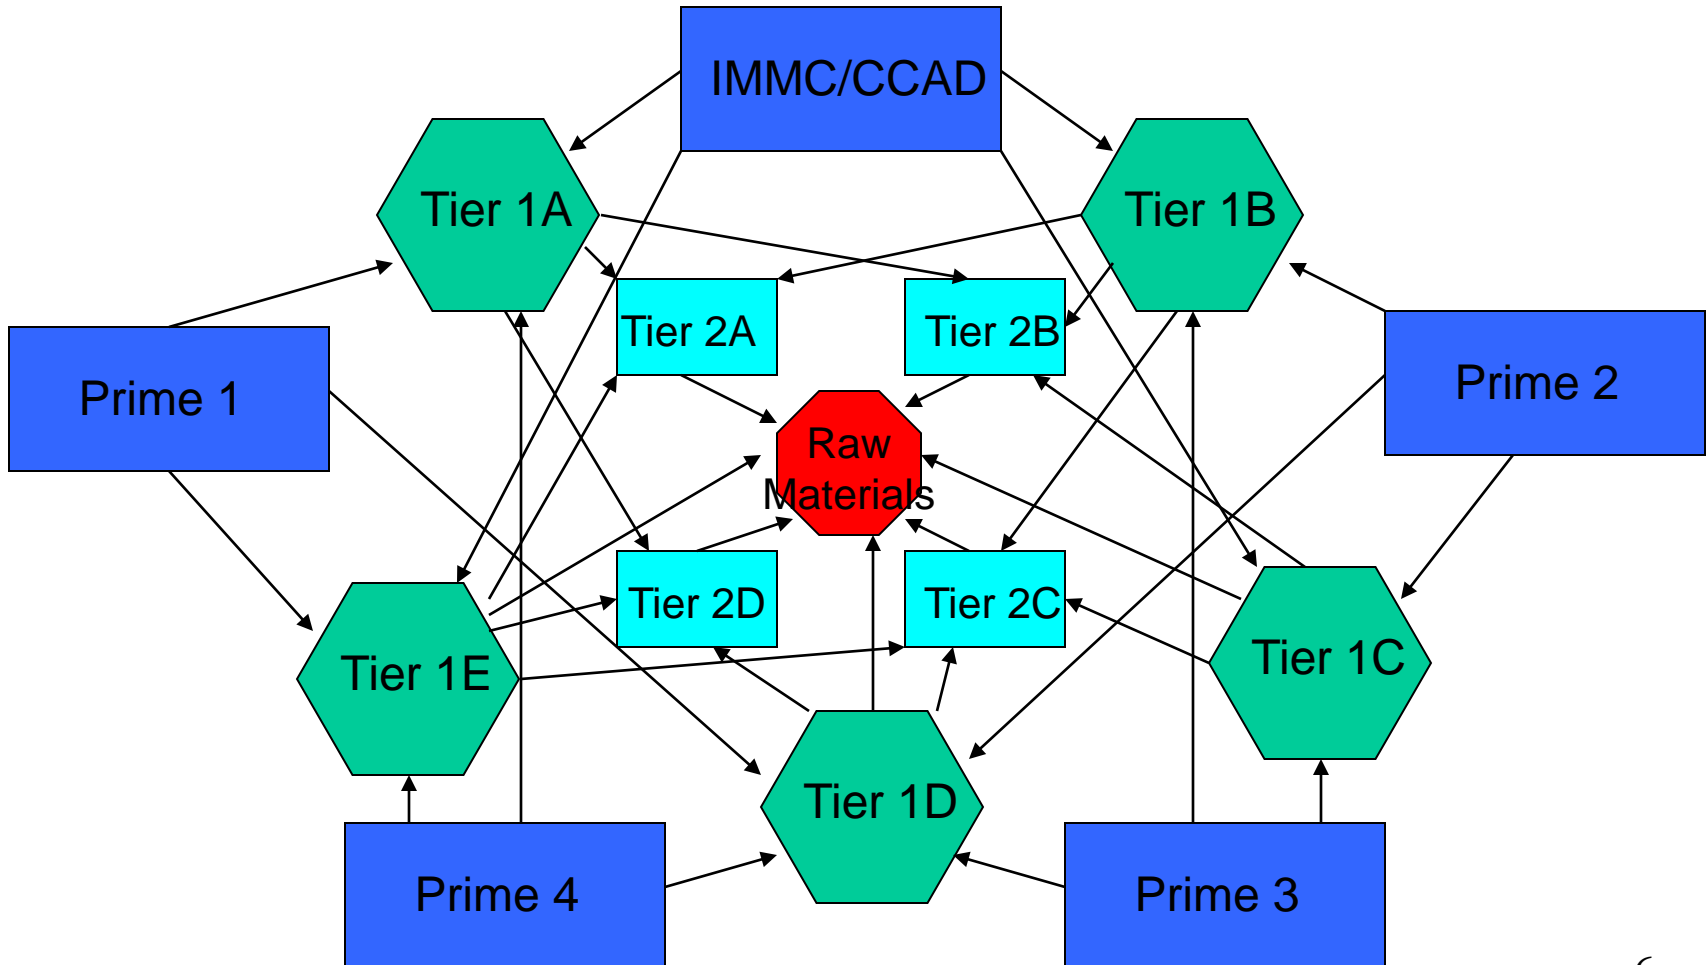

## The Sequential Enterprise

## Findings and Current Situation

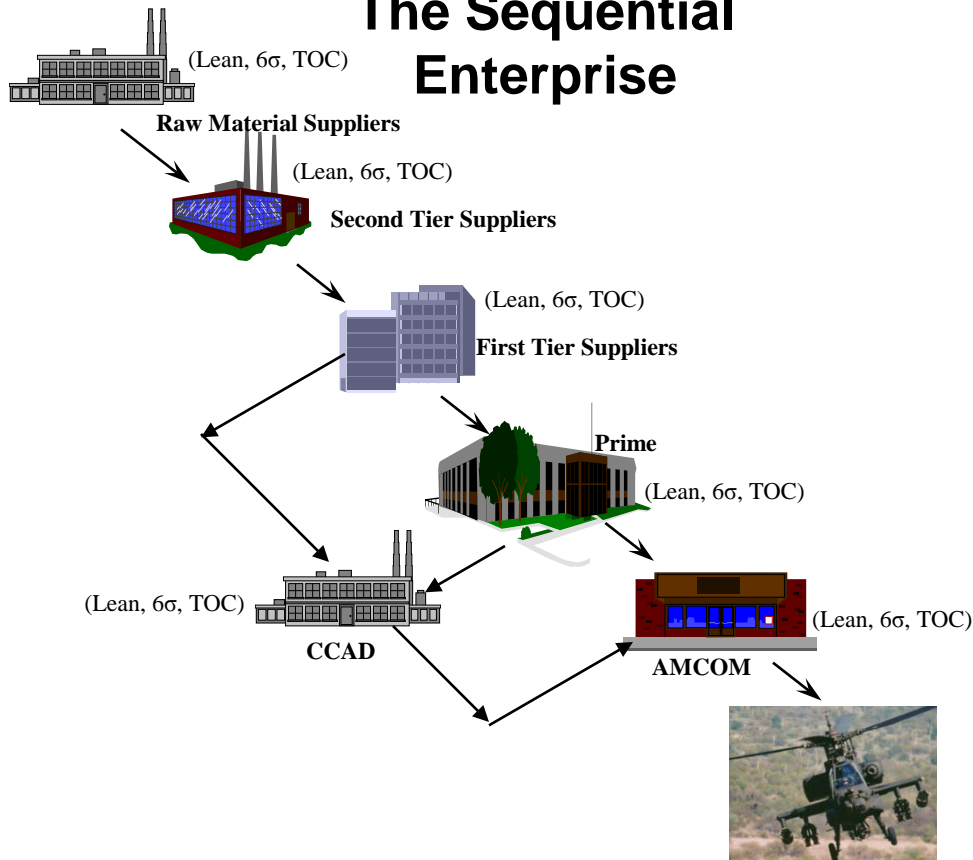

- Growing Lead Times
- No Reserve Inventories
- Sole Source For Specialty Aviation Steels
- Constrained Capacity For Specialty Metals
- Companies In Supply Chain Are Adverse To Risk
- Very Little Communication Or Visibility Of Information In Supply Chain
- Competing Demands on Supply Chain Between Platforms as Well as New Procurement and Overhaul
- High Costs and Readiness 5 Suffers

# Less suppliers - Competing resources

# Performance Improvement Efforts

## The Sequential Enterprise

## Initiatives in Lean Enterprise

- Enterprise Value Stream Maps
  - Prime Through Raw Material
  - Includes Interfaces As Well As Production Processes
  - Over 40 Companies Involved
- Continuous Improvement Events
  - Factory-level Value Stream Maps
  - Kaizen Events Performed Based On Findings From Value Stream Mapping Events
- Multi Echelon Supply Chain Maps Provide Enterprise-Wide Knowledge
- Modeling and Simulation of Enterprise Processes and Supply Chain

# Critical Defense Supply Chain Issues

1. Communication and visibility of data throughout supply chain /supplier relations
2. Strategic raw materials
3. Use of ID/RFID/Sensor Networks
4. Designing the supply chain for specific products
5. Smooth/stable funding
6. Structure of contracts
7. Product Life-cycle Management and design for the supply chain
8. Focus on value added processes
9. Integrated Enterprise

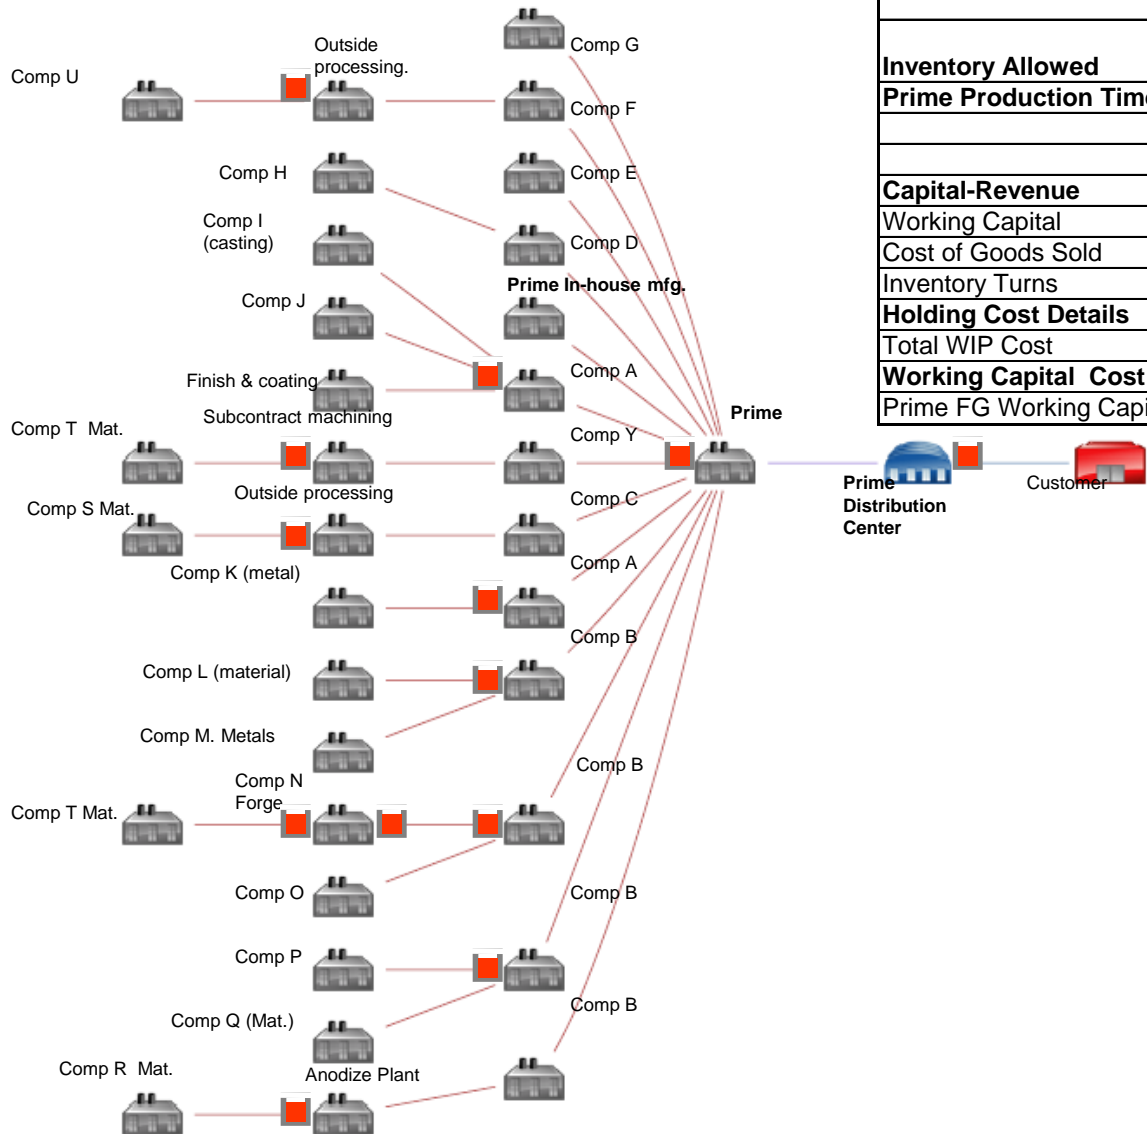

# Matching Supply Chains with Products

	Functional Products	Innovative Products
Efficient Supply Chain	match	mismatch
Responsive Supply Chain	mismatch	match

Marshall L. Fisher, Harvard Business Review, March-April 1997

# Defining Optimum Strategic Inventories

	Base Scenario	Base Scenario
<b>Inventory Allowed</b>	Only FG at Prime	Components & Strategic FGI
<b>Prime Production Time</b>	Avg. 405 days, Std. Dev.: 45 days	Avg. 100 days, Std. Dev.: 10 days
<b>Capital-Revenue</b>		
Working Capital	\$5,315,086	\$1,834,808
Cost of Goods Sold	\$3,519,504	\$3,519,504
Inventory Turns	0.6621725	1.918187
<b>Holding Cost Details</b>		
Total WIP Cost	\$5,218,054	\$1,790,875
<b>Working Capital Cost</b>		
Prime FG Working Capital	\$970,260	\$331,320

# Industrial Base Issues

- Difficulty in working with the U.S. Government
  - Unstable work
  - Source approval process (each part requires approval)
- Lower tier suppliers finding growth in non-aerospace industry over the past decade
  - Helicopter fuel tank supplier issue
  - Growth in non-American automotive
- Multiple Supplier Certifications
  - NADCAP
  - Individual OEM Certifications
- Value of Government Inspection Hold Points
  - Example – aviation part has 38 weeks PLT
  - 13 weeks of which are Government hold points
  - Zero rejections in over 30 years

# What can be done?

- Shift to supportive culture vs. adversarial
- Realistic FAR interpretations
- Make it easier to work with US Government
  - Expand industrial base focusing on companies that have worked with Government in the past
  - Qualify suppliers by part families and similar product lines
- Inspection focus on processes not products
- Focus on true customer and value added processes
  - Understand real demands
  - Streamline administrative lead-time
- Educate Government work force on products and their use not rules and regulations
- Institute multi-year funding
- Evaluate need for multiple certifications

# Transforming the Enterprise

- Information Sharing and Visibility
  - Data Analysis & Integration
  - Demands and Forecasts
  - Production and Logistic Issues
  - Collaboration Tool – AMCOM to Prime
  - Collaboration Tool – Prime to Suppliers
- Supply Chain Collaboration Through Organizational Linkages (The Toyota Model)
  - Voice of Supplier Committee
  - Supplier Association
  - Supplier Quality Committee
  - Supplier Production/Logistics Issues
- Continuous Improvement
  - Lean/6σ/TOC
  - Internal, External, and Interfaces
- Industrial Base Well-Being
  - Stabilizing the Supply Chain
  - Flexible Contracts for Commodities
- Initiatives for Specialty Metals
  - Pre-positioning raw materials
  - Berry Amendment Waivers
  - DPAS – Tracking DO's, Initiating SPAR's
  - Economic and Trade Policies

# Future Directions in Aerospace SCM

- Innovative contracting especially in the area of raw material suppliers
- Enterprise metric development and dissemination through out the supply chain
- Use of modeling and simulation
- Aligning products with the correct supply chain
- Collaboration through out the supply chain
- Expansion of lean
  - Lean Engineering/Product Development
  - Lean Supply Chain (Legacy Systems)
  - Lean Office (Administrative Functions)

# Final Thoughts

- Understand your enterprise!
- Determine who's supply chain it is and then structure the enterprise accordingly
- Supply Chain Management is about behavior – are you contractually incentivizing the behavior you want from your suppliers?
- One supply chain type will probably not adequately support your enterprise
- Focus on a few enterprise metrics
- Collaboration – assume nothing!

# Example Supply Chain Map

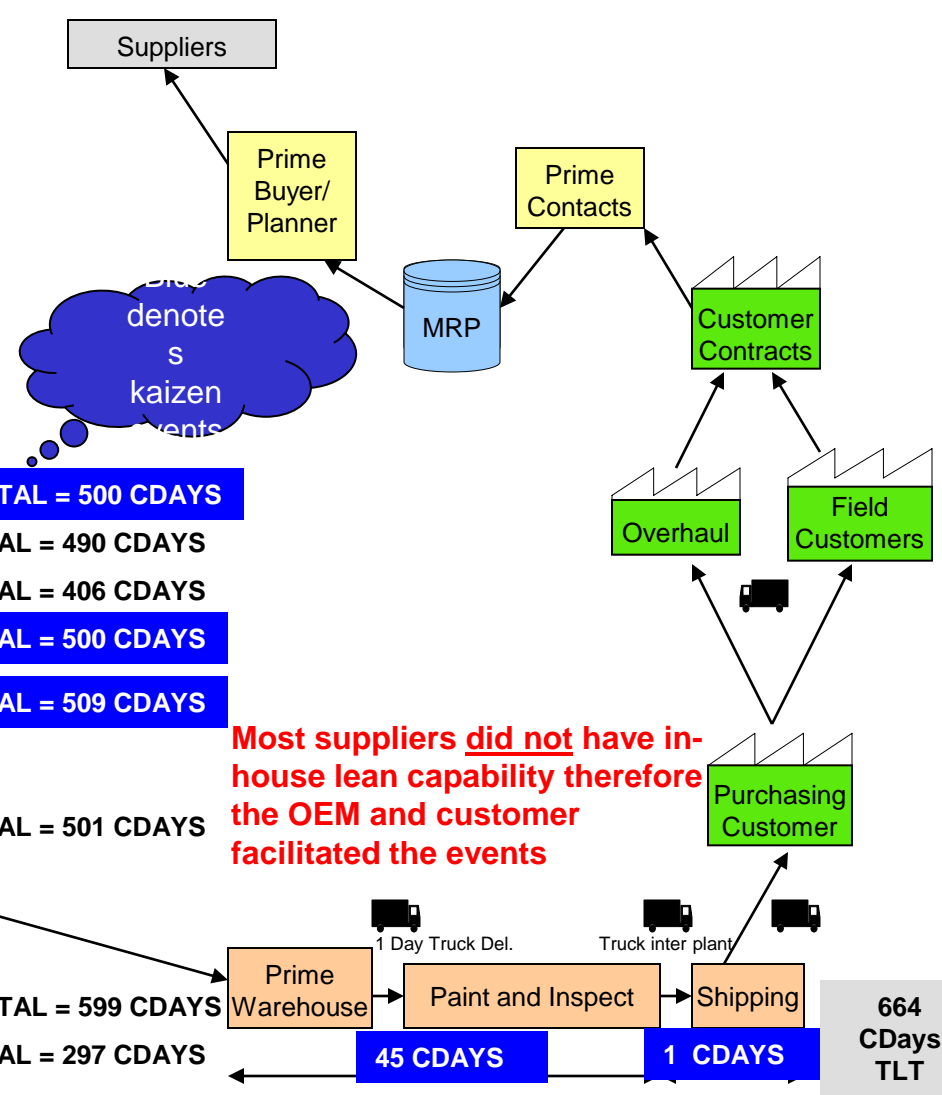

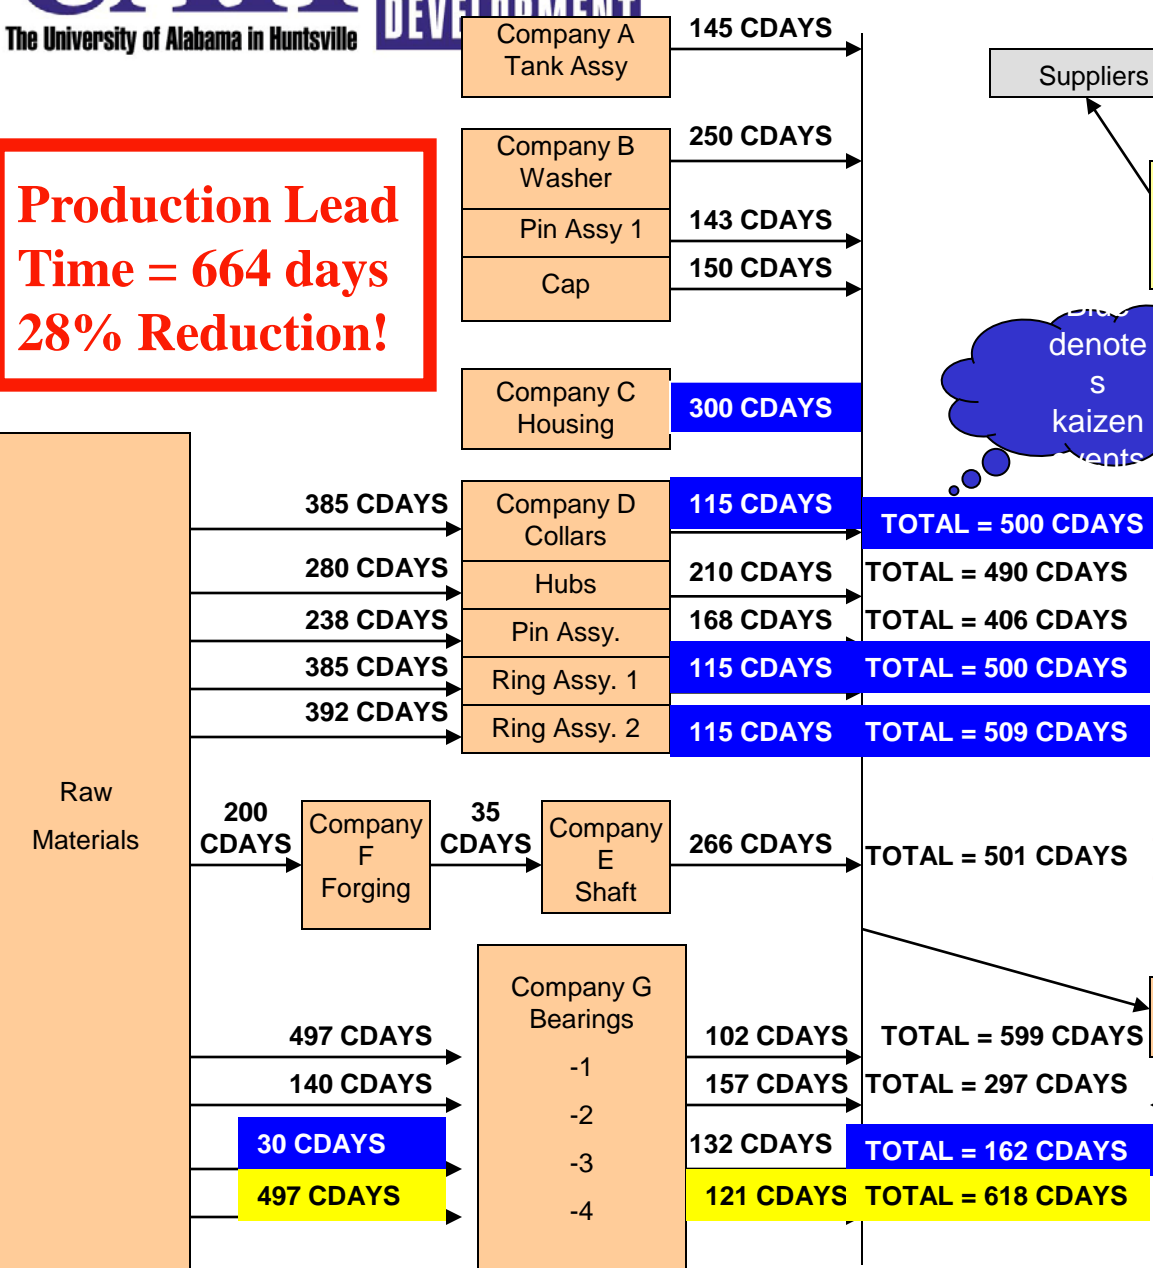

**Production Lead Time = 917 days**

# Current State Enterprise VSM

# Future State Enterprise VSM

**Production Lead Time = 664 days**  
**28% Reduction!**

denote s kaizen events

Most suppliers **did not** have in-house lean capability therefore the OEM and customer facilitated the events

**Is there still room for improvement?**  
**If so, where should we start?**

## **A Side Note-----**

# **Aviation Steels, Titanium and Aluminum**

## **The Perfect Storm**

**Reduced US Steel Capacity---Forty Five Bankruptcies Since 1997**

**Growth in DOD Demand**

- **Increased Operational Levels**
- **Harsh Environment for Aviation Platforms**

**Dramatic Jump in Demand for Commercial Aircraft**

- **600 Orders for New Planes in 2004**
- **2,000 Orders for New Planes in 2005**

**Heightened Demand for New Turbine Helicopters**

- **2000-2005: 900 Produced per Year**
- **2005-2009: 1,100 Expected Annual Production**

**And Now ..... Oil and Gas Exploration Demand**
