REDSTONE ARSENAL, AL

## MISSION:

Our intelligence professionals conduct engineering analyses of foreign weapons systems and are experts in radar, missile, communication, electro-optical, infrared, and laser systems. Our goal is to provide the intelligence assessments our soldiers, sailors, airmen, and marines need to protect themselves from harm and to fight effectively when necessary; our senior policy makers need to make informed decisions; U.S. weapons developers need to design effective weapon platforms; and Homeland Security needs to defend the nation.

Our approach is to reverse-engineer weapon system designs by analyzing all available information. We use state-of-the-art labs, analytic tools, and computing systems to model the weapons, simulate performance, assess lethality, and identify vulnerabilities. We partner with analysts and agencies around the world to bring together the deepest expertise and greatest capabilities.

## FEATURES:

- Challenging assignments and career-broadening experiences
- Opportunities for short-term deployments and long-term assignments worldwide
- On-site fitness center with 3 hours of paid fitness time weekly
- Job-related travel across the U.S. and worldwide
